IP Rating = Ingress Protection Rating

**Zone 0**  
Inside the bath or shower. IP rating must protect against immersion/total immersion in water (IPX7/IP67).

**Zone 1**  
Above the bath or shower to a height of 2.25m. IP rating must protect against water spray from all directions (IPX4/IP44).

**Zone 2**  
This is the area stretching to 0.6m outside of the bath or shower. IP rating must protect against water spray from all directions (IPX4/IP44).

**Outside Zone**  
Outside Zones - (Previously Zone 3, which was removed under the 17th Edition Wiring Regulations 857671) No IP Rating required.

IP Ratings Explained

1	Protected against solid objects over 50mm, e.g. accidental touch by hands.	1	Protected against vertically falling drops of water, e.g. condensation.
2	Protected against solid objects over 12mm, e.g. fingers.	2	Protected against direct sprays of water up to 15 degrees from the vertical.
3	Protected against solid objects over 2.5mm, e.g. tools & wires.	3	Protected against direct sprays of water up to 60 degrees from the vertical.
4	Protected against solid objects over 1mm, e.g. wires & nails.	4	Protected against water splashed from all directions, limited ingress permitted.
5	Protected against dust limited ingress, no harmful deposits.	5	Protected against low pressure jets of water from all directions, limited ingress permitted.
6	Totally protected against dust.	6	Protected against strong jets of water, e.g. on ships deck, limited ingress permitted.
		7	Protected against the effects of temporary immersion between 15cm and 1m.
		8	Protected against long periods of immersion under pressure.

**EXAMPLE: IP65**  
1st Digit: 6 (Totally protected against dust)  
2nd Digit: 5 (Protected against low pressure jet of water from all directions, limited access permitted.)

Colour Temperature & Lumens

Colour temperature/Kelvin (K) is a measurement of the warmth or coolness of light.

The look and feel of a space can be greatly affected by colour temperature. Therefore, it is important to choose the right colour temperature based on the mood you want to create.

Based on the (K) numbered scale, the higher the colour temperature, the cooler, more energising light will be.

A lower colour temperature will produce a warmer, more relaxing glow. The colour temperature (K) should be considered carefully to satisfy a room's desired purpose, mood and style.

**Lumens Explained: (lm)** are a measure of the total amount of visible light (to the human eye) from a lamp or light source. The higher the lumen the "brighter" the lamp will appear.

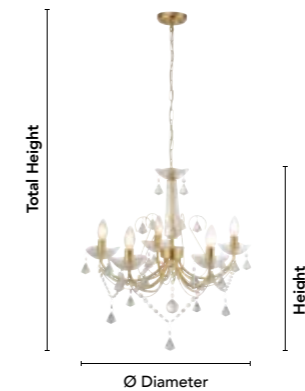

**NOTE: All Kelvins and Lumen outputs (raw data) are quoted with a tolerance of 10% Lumens can vary due to the finish on the materials**

**Candle Light 1800K**      **Warm White 2700K-3000K**      **Daylight 6500K**
